

The four agents as they stand, the rules any arrangement has to obey, and empty lanes to draw a different one.

THE RULES – WHAT HAS TO COME BEFORE WHAT

- **plan** after **identity** — every planning answer is an answer about what kind of business it is.
- **look** after **identity** — the logo and icon draw the brand, so they need the name.
- **detail** after **plan** — custom code needs to know which components were picked; nothing can say what a button does before the page holding it exists.

And that is the whole list. Nothing says **detail** needs **look** — a theme and a stylesheet tell it nothing. Today it waits for **look** anyway, because a wave is a barrier: everything in wave 2 must land before wave 3 starts. **Worth checking against the real field descriptions before acting on it.**

Put each agent in a lane. Anything sharing a lane runs at the same moment; a lane waits for the one before it. Fewer lanes = less waiting — so long as the three rules still hold.

THE PAGE, FOR COMPARISON

TODAY

Seven bands, one lane. None of them needs to know what the others wrote, so all seven fire at once — 424s of work in 93s. That is the shape that pays.

Three of the four run alone. You pay for four calls and overlap one pair, which is why this split came out a **wash** — 66s saved, ~66s of extra cost. **Widening a wave is the only thing that changes the arithmetic.**
